Professional Summary

Engineer from 2026 batch with strong foundations in Python, Java, SDLC processes, databases (SQL/MongoDB), and DevOps fundamentals. Hands-on experience through internships and academic projects in automation, system development, debugging, and documentation. Skilled in collaborating with teams, following SOPs, and delivering reliable software solutions. Certified training exposure in Python and CI/CD concepts with a strong learning mindset and commitment to quality-driven development. Internship experiences in software development and AI-based applications have strengthened Automation, problem-solving, adaptability, and teamwork skills.

Experience

RDE Automation Tools Intern

Autoliv | [AeroSpace park](#) | 14 Aug 2025 – 14 Nov 2025

- Supported system development tasks by assisting in automation tool creation and validation.
- Worked in Linux environments to troubleshoot system issues and analyse logs.
- Followed SOPs and documentation standards for process consistency.
- Collaborated with cross-functional teams to improve deployment workflows.
- Contributed ideas to improve reliability and performance of internal tools.
- Worked within SDLC practices including requirement understanding, testing, and validation.

Incubator

Osmania University | 1 Aug 2023 – 2 Feb 2024

- Engineered a cross-platform mobile application utilizing Flutter, incorporating highly intuitive user interface components.
- Significantly enhanced the user experience through meticulous design implementation and robust functional contributions.

Education

Bachelor in Technology-Computer Science (Artificial Intelligence and machine learning)

CMR University | [CMR University Engineering Block](#) | 2022-26 | CGPA – 8.71 | Graduate year : 2026

Key Skills

Technical Skills:-

Programming & Scripting	Software Development	Certificates
- Python (automation, scripting, APIs) - Bash (basic scripting) - JavaScript (basic scripting) Networking & Systems - TCP/IP, DNS, HTTP/HTTPS (fundamentals) - REST APIs ,Fast API(python) Databases & Tools - SQL, MongoDB - Monitoring concepts (logs(git), metrics – foundational)	- SDLC understanding - Debugging & Testing basics - Documentation practices - Version control (Git) - CI/CD Automations - MLops/Devops practices	- Python Programming Certification great learning - Java programming Certification great learning - DevOps Fundamentals – CI/CD, Git Udemey - Software Development Training Academic program

Soft Skills:-

- Teamwork, Adaptability, Detail-Oriented, Problem-Solving, Time Management.
- Ability to meet deadlines with quality-focused delivery

Academic & Development Projects

Domain-Specific Language Model (RAG) for medical tests -- <https://github.com/akshayjamnis/DomainSpecific.git>

- Built a Python-based automated pipeline for data ingestion, retrieval, and response generation.
- Focused on system reliability, repeatable execution, and dependency management.
- Tools: Python, Hugging Face, FAISS, PyTorch.

Fine-Tuning LLMs different options in one click

- Developed script-driven workflows for handling structured datasets.
- Managed execution environments, libraries, and experiment pipelines.

Recommender System(personalised) for Stock Analysis

- Implemented a data processing and analysis pipeline using Python.
- Automated data handling and result visualization.
